## Product Designer + Front-End Developer

Product-focused designer/developer with 17+ years working between UX, product strategy, front-end implementation, design systems, and product delivery. Experienced as the conduit between design teams and development pods, turning early-stage product-roadmap ideas into coded prototypes, MVP web apps, A/B-testable flows, design-system specs, and production-ready UI. Recent work includes building Radium AI Cloud Studio in Next.js/TypeScript, prototyping Microsoft Copilot Learning and Copilot Daily Inspiration concepts, and helping move Binance.US trading experiences and design systems into production.

## Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                   |                            |               |

- Led product design for a Canadian gift card savings platform while contributing to React Native development on a Bitcoin wallet
- Designed and shipped mobile/web purchase, savings, wallet, loyalty, and account flows that drove a 30% engagement lift
- Partnered with engineering on UI implementation, app-flow details, mobile component behavior, interaction states, and production polish
- Helped customers save an average of \$500 per year through improved gift card discovery, purchase, and everyday savings experiences

## UI/UX Designer and Web Developer      Earlier Experience      Jan 2008 - Dec 2018      Vancouver, BC

- Delivered hybrid design/development work across ecommerce platforms, CRM products, marketplace experiences, custom web applications, and client projects
- Designed and built web, ecommerce, and product experiences across freelance/contract work and full-time roles for Junglescout, Ambient Lounge, Cansel, and Reala
- Combined UX design, web design, front-end implementation, ecommerce optimization, SEO, content, email funnels, and analytics-driven product improvements across early-stage and client businesses

## UI/UX Designer      Junglescout      Oct 2014 - Aug 2016      Vancouver, BC

- Designed UX/UI improvements for ecommerce and SaaS workflows, supporting product usability, customer acquisition, and conversion-focused product experiences
- Created wireframes, interface designs, landing pages, and product flows for web-based customer experiences

## Web Designer and Ecommerce Specialist      Ambient Lounge      Apr 2012 - Sep 2014      Vancouver, BC

- Designed and optimized ecommerce experiences, landing pages, product pages, campaign assets, and customer purchase flows
- Supported ecommerce growth through web design, SEO, content, email marketing, and conversion-focused improvements

## Web Designer      Cansel      2009 - 2011      Vancouver, BC

- Designed and maintained web experiences, marketing pages, and digital assets for a B2B technology and services business
- Supported website updates, content improvements, and front-end presentation of product and service information

## UX Designer and Web Designer      Freelance / Contractor / Consultant      Jan 2008 - Jul 2019      Vancouver, BC

- Delivered UX, UI, web design, ecommerce, CRM, and front-end implementation work for startups, SMBs, and client businesses
- Worked across research, wireframes, visual design, HTML/CSS, JavaScript, CMS/ecommerce platforms, SEO, email funnels, and digital marketing execution

## Selected Projects

### Founder      Aerobase      Dec 2024 - Present      Vancouver, Canada

- Founded and designed a flight search platform that ranks routes by circadian impact, helping travelers compare itineraries by jet lag risk, recovery time, schedule quality, and travel fatigue
- Created intelligent trip-planning and jet lag recovery tools focused on healthier travel decisions and personalized flight selection

### Co-Founder and Product Designer      Reala — Website / CRM Real Estate Platform      Aug 2016 - Oct 2018      Irvine, United States

- Co-founded and designed a real estate search and CRM platform for agents to manage listings, leads, client relationships, and property workflows
- Designed search, listing, CRM, and agent workflow experiences for real estate professionals

## Education

### New Media and Design, Bachelor's Degree      Oct 2008 - Dec 2009      Vancouver, BC

British Columbia Institute of Technology

### Business Information Technology Management, Bachelor's Degree      Sep 2006 - Oct 2008      Vancouver, BC

British Columbia Institute of Technology

## Certifications

### UX Certification #1058476      Jul 2021 - Sep 2021

Nielsen Norman Group

## Skills

**Programming Languages:**  Python,  JavaScript /  TypeScript,  HTML /  CSS,  Swift,  Java

**Front-End Frameworks:**  Next.js,  React,  Expo, React Native, Flutter

**Prototypes and MVPs:** coded prototypes, functional prototypes, high-fidelity prototypes, MVP web apps, A/B-testable flows, roadmap experiments, stakeholder demos, design-to-code workflows

**Backend and Tooling:** Supabase, PostgreSQL, Node.js, GitHub CLI, Cursor AI, Storybook, AI agent automation, LLM workflows

**Product Design:** Figma, UX/UI design, wireframes, high-fidelity UI, interaction design, information architecture, design systems, accessibility, research, usability testing, qualitative analysis

**Delivery:** engineering standups, implementation review, design QA, component parity, production handoff, release collaboration, build reviews, front-end behavior specs

**Domains:** AI dashboards, Microsoft Copilot AI, Copilot integrations, RAG workflows, fintech, crypto trading, ecommerce, marketplaces, mobile/web apps, CRM platforms

**Marketing and Growth:** SEO, social media marketing, email funnels, viral video marketing, ecommerce optimization, landing pages, conversion-focused design
